## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 7 and 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 7 recites the limitation "said respective buffer location" in the last line.

There is insufficient antecedent basis for this limitation in the claim.

Claim 9 recites the limitation "said plurality" in the last line. There is insufficient antecedent basis for this limitation in the claim. There are many pluralities and "said plurality" does not clearly refer to which one of the pluralities.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 2, 3, 4, 8-10, 14 and 17-19 are rejected under 35 U.S.C. 102(e) as being anticipated by Wilford et al..

Wilford et al. discloses a method and a memory device having all the steps and elements as recited in claims 2, 3, 4, 8-10, 14 and 17-19 as follows:

- receiving first and second data bit values at first and second memory locations respectively (first N/X bits and the next N/X bits);
- transferring the first and second data bit values to first and second multiplexer locations respectively;
- completing the transfer of the first bit value from the multiplexer prior to completing the transfer of the second bit value (column 3, lines 19-21); and
- outputting the first bit value from the multiplexer prior to completing transfer of the second bit value (multiplexer sequentially transfers the X sequential data portions).
